Adeshina (Mide) Otutuloro

VP of Front-End Engineering · Design Engineer · AI-native product builder

Akure, Ondo State, Nigeria · Remote · +234 810 097 7932 · ademideotutuloro@gmail.com · midesamuel.com · linkedin.com/in/ademidesamuel

Profile

Most products break in the gap between the Figma file and the merge request. That gap is where I work.

I'm a design engineer with 8+ years designing fintech, wellness and creator-economy products used by 50,000+ people. For nearly four years I've led design and front-end at NaXum, a referral-marketing SaaS used by 35+ white-label direct-selling brands, rising from UI designer to VP of Front-End Engineering.

I design the interface, turn it into a working prototype with Claude Code, and stay with it through code review until it ships the way it was designed. In 2026 I took an AI assistant with credits and billing from concept to production in 15 weeks, rebuilt the company's website in 23 days, led a PCI remediation from 171 findings to a clean pass in five days, and led the performance rebuild of a front end serving 80,000 users. The design systems I've built cut our design time by 40%.

Core skills

- **Design:** product and UI/UX design, design systems, Figma, brand identity, mobile-first and responsive design, prototyping, illustration
- **Front-end engineering:** Vue 3, React, Next.js, Tailwind, PrimeVue, Storybook, HTML/CSS/JavaScript, WordPress and Elementor
- **AI:** Claude and Claude Code for prototyping and front-end builds, AI product design (RAG, usage-based credits and billing), AI-assisted code review and team workflows
- **Quality and delivery:** merge-request review against a shared code standard, end-to-end release testing, CI/CD and staging-first releases, performance audits
- **Security and compliance:** PCI DSS remediation, security-focused code review, 2FA rollout
- **Web and growth:** site migrations, SEO (redirects, sitemaps, Search Console), localisation across 11 languages

- **Leadership:** team leadership across time zones, hiring and onboarding, training programmes, process design, Kaizen (continuous improvement)

Experience

NaXum Online Marketing Services, LLC · Jan 2023 to present

Referral-marketing SaaS for direct-selling brands · Remote (US company)

Vice President of Front-End Engineering · Jul 2025 to present

I lead design and front-end for a multi-tenant referral-marketing platform used by 35+ white-label clients, from first mockup to production merge.

- **AI product:** Took an AI assistant with credits, plans and billing from concept to production in 15 weeks. I wrote the monetisation stories, built the credits and top-up flows, and ran the end-to-end test gate that caught double-billing, a deploy that re-enabled a disabled feature and a replay bug before launch.
- **Corporate website:** Rebuilt naxum.com from WordPress to Next.js in 23 days, proposal to live: new brand, new design system, zero downtime, 700+ blog posts migrated and search rankings intact.
- **Compliance:** Led a PCI remediation from 171 scanner findings to a clean pass in five days, and closed a privilege-escalation hole with server-side gates.
- **Performance:** Audited an 80,000-user front end (358 components, about 193k lines, 730 API call sites) and led its performance rebuild. Cut the entry bundle by 80.6%, then scoped a third phase for perceived speed, and verified 100+ pages before merge.
- **Platform launch:** Took the rebuilt Vue 3 back office from developer-built to production in 16 days. I redesigned four modules myself and cut 110 outlined props across 57 files to zero.
- **Features:** Shipped 11-language localisation, a menu builder and a self-service branding tool in one month, plus onboarding, gamification, quizzes and analytics for the new platform.
- **Sister brand:** Architected and built a four-page Next.js marketing site with a headless commerce backend in three weeks, then handed the content workflow to a designer.
- **Code review:** Caught three security holes in three days of review, including an authorization bypass and a stored-XSS vector, before any reached production. Verified 13 client platforms in 90 minutes in one pass, with per-client evidence.

- **AI-native team:** Halved production time for a recurring asset (16 hours to 8) with an AI workflow, wrote the team's AI-assisted engineering playbook, and specced an internal client-knowledge portal with cited AI answers (25+ user stories and a clickable prototype) in one day.
- **Team and process:** Produced a 13-episode onboarding course, grew the team's rule book to 400+ engineering rules written from production misses, and have filed 733 daily reports since Nov 2023.

Vice President of Design · Nov 2023 to Jul 2025

I led the design team and front-end delivery across the platform's client launches.

- Led design and front-end for 14 white-label client launches in 18 months plus 17 smaller client builds, each from mockup to alpha-testing sign-off, several in two languages.
- Founded the design system: a 15-item roadmap, governance model, Figma and Storybook documentation, and the first component library on PrimeVue, which the new back office was later built on.
- Led design and front-end for the ground-up Vue 3 back-office rebuild and migrated the first client onto it.
- Ran the front-end quality gate, reviewing every merge request and user story with reproduction steps.
- Redesigned the company's 24-hour incident process and moved the team to agile, team-based task management.
- Led the restoration of two client platforms after a security incident, including the post-mortem.
- Built a reusable WordPress/Elementor theme and trained the team on it, turning corporate-site builds into a template.
- Onboarded 19 engineers and designers, confirmed as VP after probation in July 2024, and led the design team's monthly accountability.

User Interface Designer · Jan 2023 to Nov 2023

- Designed and built the platform's first client front ends: replicated shopping carts, commission reports and corporate-site pages.
- Proposed the framework for the Vue 3 back-office rebuild in March 2023, which became the company's new platform, and wrote its first user flows.
- Wrote 148 engineering rules from production misses in my first year.

InstaPass / InstaCash · Product Designer (part-time) · Jan 2020 to Dec 2022

Fintech for underbanked Latino Americans · Remote (California, US)

- Led design projects from inception to delivery, working with researchers, content writers and developers, and reporting to stakeholders and investors.
- Maintained one design language across iOS, Android and the web.
- Worked with developers so every design was built as planned and kept its user experience intact.
- Designed detailed interaction behaviour for a product aimed at the 60% of Latino Americans with little access to mainstream financial services.

Gipperpay · Head of Design (part-time) · Jan 2022 to Dec 2022

Crypto payments platform · Remote (California, US)

- Led all visual communication and branding for the company's crypto platform.
- Created and maintained the brand guidelines and design standards across every channel.
- Designed the website and app with product, marketing and engineering, testing new features for usability and conversion.
- Kept designs compliant with legal and regulatory requirements for cryptocurrency and financial services.
- Produced graphics and animations for social media in the brand's voice.

coinprofit · Senior Graphic Designer (part-time) · May 2022 to Dec 2022

Nigeria

- Increased brand recognition by 35% through a cohesive rebrand across every platform.
- Designed app-screen visuals with the product and UX/UI teams, improving user adoption by 20%.
- Delivered the on-brand designs behind the mobile app's launch.

iLearnBlock · Senior Graphic Designer (part-time) · Apr 2018 to Dec 2022

Nigeria

- Created the marketing assets, built and managed the company website, and produced content for social media.

- Managed the brand across every channel.

WillFran Consulting · Media and Creative Director (part-time) · Jan 2019 to Sep 2021

Research consultancy · Lagos, Nigeria

- Ran media and design for research projects and surveys, including detailed survey reports.
- Produced online conferences and events, and the graphics and digital products for them.
- Managed the company website and kept it updated with the latest research and survey results.
- Prepared raw survey data for analysis.

Education

Federal University of Technology, Akure · Bachelor of Technology (BTech), Civil Engineering · 2013 to 2019

Certifications

- Google UX Design Professional Certificate
- UI/UX Design Hybrid: from Figma to HTML, CSS and JavaScript
- Change Management Certification
- Basics of Project Management

Publication

- *Groundwater Development: A Sustainable Alternative to Water Supply in the Federal University of Technology, Akure*

Leadership and community

- Founder, TechTummy (2023): a tech community with a mentorship programme matching mentors and mentees
- Youth President, RCCG City of David Area
